

Jiawei Li

jiawl28@uci.edu

Jiawei Li has extensive research experience in utilizing **Machine Learning**, **Deep Learning**, and **Large Language Models** to improve software quality. He successfully adapted **ReAct prompting** technique on GPT-4 to automatically generate commit messages by enabling it to engage in reasoning while interacting with the software repository through actions. The quality of the generated messages is considered to be better than humans and state-of-the-art techniques. The work has won **ACM SIGSOFT Distinguished Paper Award**. In addition, he built an **ensemble Machine Learning model (Bi-LSTM, Bi-GRU, and XGBoost)** to evaluate commit message quality, outperforming other existing models. Moreover, he has experience applying **static program analysis** techniques to detect software quality issues. Also, he has applied various empirical analysis techniques in his publications, including **Card Sorting**, **Open Coding**, and **Survey**.

| EDUCATION | Ph.D. Software Engineering , University of California, Irvine (exp.) 2026 M.S. Computer Science , University of California, Irvine 2020 B.Eng. Software Engineering , Xi'an Jiaotong University 2019 |
| SERVICES | Reviewer (Full length technical paper) , Automated Software Engineering 2025 Shadow Research Track Program Committee Member , 2026 48th IEEE/ACM International Conference on Software Engineering (ICSE) 2025 Reviewer (Full length technical paper) , IEEE Transactions on Reliability 2025 Shadow Research Track Program Committee Member , 2025 47th IEEE/ACM International Conference on Software Engineering (ICSE) 2024 Program Committee Member (Artifact Evaluation) , 2025 47th IEEE/ACM International Conference on Software Engineering (ICSE) 2024 Reviewer (Full length technical paper) , Transactions on Software Engineering and Methodology (TO SEM) 2024 Graduate Mentor , Global Research Experience in Artificial Intelligence (GREAT) Program 2023 Graduate Mentor , Global Research Experience in Artificial Intelligence (GREAT) Program 2022 |
| WORK EXPERIENCE | Applied Scientist Intern , Amazon Inc. 2025 Teaching Assistant/Graduate Student Researcher , University of California, Irvine 2021-Present |
| SELECTED PROJECTS | Commit Message Generation Leveraging Reasoning and Action of Large Language Model 2024 <ul style="list-style-type: none">The published paper has won ACM SIGSOFT Distinguished Paper Award.Built a GPT-4-powered commit message generation approach using LangChain that has access to a diverse and large software context associated with the code change.Enabled GPT-4 to engage in reasoning while interacting with the external world through various actions using ReAct prompting. GPT-4 serves as a reasoning engine, determining the actions to take and their sequence. Actions can involve using a “tool” which represents a function for collecting external information to support intermediate reasoning and generating the commit message.Achieved an average improvement of 30.2% over human-written messages and a 71.6% improvement over state-of-the-art commit message generation methods. Analysis of the Impact and Evolution of Commit Message Quality 2023 <ul style="list-style-type: none">Built various machine learning classifiers (Bi-LSTM, Bi-GRU, XGBoost, SVM) to automatically evaluate commit message quality.Considering the quality of the referenced links in the commit messages, the classifier outperformed state-of-the-art machine learning classifiers by 12 percentage points improvement in the F1 score. Code Readability Estimation with Large Language Models 2022 <ul style="list-style-type: none">Utilized the token probability predicted by large language models (i.e., CodeBERT) to measure source code readability. |

- Designed various features based on the token probability and conducted a **correlation analysis** between the proposed features and the human-annotated readable scores in the readability datasets.

COMPETENCES **Programming Languages** Python, Java

Technologies and Frameworks PyTorch, Scikit-Learn, LangChain, AutoGen, OpenAI API, \LaTeX , Github, Shell, R

Software Engineering Commit message quality evaluation and generation, Test smell detection and analysis, AI-generated source code detection, Code review automation, Code generation, Defect prediction, Survey, Card sorting, Open coding

Machine Learning Supervised Learning, Deep Learning, Large Language Models
